

# RollerMouse Pro3

RollerMouse Pro3 is an updated, ergonomic mouse alternative designed for you, not your computer. Sitting below your keyboard, the Pro3 eliminates the need to reach for the mouse, lessening stress from your neck to your fingertips. RollerMouse Pro3 allows you to work safer, faster and more comfortably.

**Personalized features.** Five centrally-located buttons come pre-programmed to perform everyday, common mouse functions including copy, paste and a 'one-touch' double-click; customize any of these buttons to perform your favorite shortcuts. The cursor speed, scroll wheel and rollerbar are also customizables. By default, the cursor speed button allows you to choose from ten speeds, ranging from 600 to 2400 dpi. Colored lights signify which speed setting you are currently using.

**A new look and feel.** A sturdier, aluminum base reduces risk of slipping and provides more durability. Premium leatherette padding runs the full length of the unit, offering extra wrist support. The scroll wheel has a seamless glide up, down and across the page. Keyboard risers are inserted at the back of the unit to provide height and create an ideal transition between keyboard and RollerMouse. A slider switch on the bottom of the unit is used to adjust the click force.

contour 

### Key Functions

- A. Rollerbar. Roll the bar up, down and sideways to move the cursor. Press the bar down to left click.
- B. Extra leatherette padding for superior wrist comfort.
